QuitaOnline

New Generation of Datamining

Quantitative text and data analysis constitute one of the key challenges in the contemporary world of mass media, social networks and digital technologies. Therefore, experts from Palacký University in Olomouc developed brand new software solution – QuitaOnline. QuitaOnline software eliminates weaknesses of commonly used technologies, such as excessive specificity or insufficient effectiveness and moreover allows analysis of texts and data without advanced knowledge of mathematics, statistics, programming or quantitative linguistics.

Key Advantages

- universal use
- easy categorization of data
- automation of analysis
- extensive selection of parameters
- analysis time shortening
- user friendly interface
- online application

Potential Applications

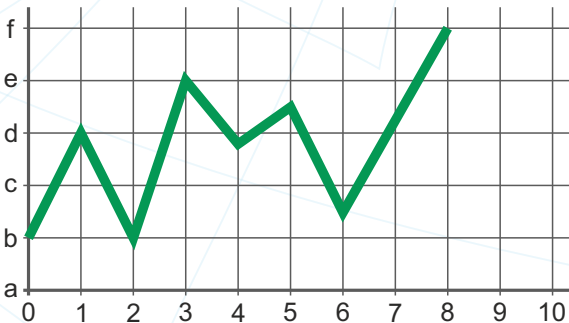

- searching for primary sources
- news analysis
- searching for plagiarism
- processing of comments on social networks
- web analysis

Team

- Dan Faltýnek
- Vladimír Matlach
- Kateřina Veselovská

IP Protection
